SUMMARY

Product engineer, **5 years** building web and mobile products, including a multi-tenant AI voice-agent platform I built solo end to end. At **Qilin Labs** I built a multi-tenant **AI voice-agent platform** end to end: Python/FastAPI services, a LiveKit SIP voice worker, and the Next.js operator console. Before that I led the CRA → Next.js 14 migration of a **20K-user** education platform. I take work from the requirement rather than the ticket, and I have shipped web, Android and backend systems to production. Author of **@astra-ui-lib/core**, published on npm.

EXPERIENCE

Senior Frontend Engineer

Aug 2024 → Present

Qilin Labs · Remote

- Sole engineer on a multi-tenant **AI voice-agent platform** — LiveKit SIP telephony, streaming STT → LLM → TTS, and a Next.js 14 ops console (**31 routes, 107 components**) for call monitoring, agent config, and quality evals.
- Tuned that pipeline to **1.3s p50** round-trip and eliminated audio dropouts (**4.37% → 0%** discarded speech) via VAD/endpointing tuning and regional STT routing (235 → 118ms); **2,585 backend tests**.
- Own frontend architecture and delivery for a Next.js education platform with **20K+ registered users (4K MAU, 1K+ DAU)**.
- Led the CRA → Next.js 14 (SSR/SSG) migration: **Lighthouse 58 → 92**, page load **~10s → ~3s**, JS bundle **2.4MB → 720KB** (-70%) via code splitting, tree shaking, and hover-prefetched navigation.
- Migrated UI system from MUI to shadcn/ui across **30+ components**; unblocked design-token theming and dark mode.

Software Engineer · Frontend Lead

Mar 2023 → Sep 2024

Hubspire Corp · Remote

- Refactored a **30k+ LOC** legacy React codebase — dependency cleanup, code splitting, tree shaking, CI optimization — cutting page load and build times.
- Built React + TypeScript + GraphQL apps with Apollo cache normalization; designed a reusable component system adopted across **3+ projects**.
- Mentored 3 junior engineers to mid-level through code review, pair programming, and guided technical feedback.

React Developer

Feb 2022 → Mar 2023

Woxro Technology Solutions · Thrissur, Kerala

- Built the React frontend for banking applications with real-time payment status tracking and Razorpay integration; shipped across fintech and retail.
- Designed a centralized form-validation and error-handling system reused across the team's projects.

Web Developer

Jul 2021 → Feb 2022

Limenz Technology · Calicut, Kerala

- Delivered **10+** responsive interfaces from Figma/Adobe designs; optimized legacy WordPress sites for mobile and page-load performance.

SELECTED PROJECTS

EdTech assessment platform — client project

React, React Native (Expo), FastAPI, Supabase, Claude vision · Lead engineer across three coordinated apps on one shared backend: a React admin and supervisor web app, an Expo mobile app with on-device answer-sheet scanning, and a FastAPI microservice that OCRs and grades scanned sheets via async callback, with human-in-the-loop review and score override.

Astra UI [↗](#) — Published React component library · [npm](#) [↗](#)

React 18, TypeScript, Tailwind, Turborepo, Rollup, Changesets · CVA-powered variants, polymorphic components, jest-axe a11y tests, automated semver and npm publish via GitHub Actions.

Commercial real-estate platform — client project

Next.js 16 (App Router), React 19, Sanity CMS, Mapbox, TypeScript · **17 routes, 41 tests** · Indexable native listings with map clustering and multi-field search, OTP-verified lead capture, 6 gated deal calculators, and a broker-editable Sanity Studio.

AI product configurator — jewelry e-commerce · client project

React 18, TypeScript, Vite, Zustand, TanStack Query, Tailwind · Guided wizard → AI chat → live configuration stage with custom drag-to-rotate physics and drag-to-reorder slots; ships as one bundle mounted into an established Shopify OS 2.0 theme.

figma-connect [↗](#) — Local Figma MCP server with a verification oracle

TypeScript monorepo, Playwright, SQLite/FTS5 · 35 MCP tools for full-fidelity design reads, plus verify_node: pixel-diffs an agent's generated code against the live Figma node in headless Chromium.

REDLINE [↗](#) — Android app from a reverse-engineered BLE protocol · [GitHub](#) [↗](#)

Kotlin, Jetpack Compose, Room · Reverse-engineered my motorcycle's Bluetooth cluster protocol, then built a 14k-LOC app (205 tests) for cluster nav, live telemetry, and ride analytics.

SKILLS

Backend, Data & Platforms: Node.js, Python, FastAPI, PostgreSQL, Redis, GraphQL (Apollo), Sanity, WordPress, Drupal, Shopify (Liquid, OS 2.0), Go, Supabase, Prisma, Socket.IO, Salesforce (Apex, LWC)

Frontend & UI: React, Next.js, TypeScript, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, shadcn/ui, MUI, Astro, Mapbox

Mobile & Native: React Native, Expo, Kotlin, Jetpack Compose

AI & Voice: LiveKit (SIP/WebRTC), Deepgram, Silero VAD, Qdrant (RAG), Vercel AI SDK, Claude Code, Cursor, MCP

Testing & Tooling: Vitest, Jest, React Testing Library, Cypress, Git, Docker, Vite, Turborepo, Rollup, GitHub Actions, Changesets, Playwright
